

# Pick-Up Sportz Sprint #0 Presentation

Chaz Del Prato, Benjamin Seo,  
Christine Duong, Brandon Le,  
John Him, Jamil Khan

# Business Requirement Document

# Pick-Up Sportz

## Product Detail:

- The app allows a user/player to pick a sport to play (baseball, soccer, tennis, basketball, etc), select a place to go on a map, create the event and list the items that are needed to play the game.
- Each player who has the app within a certain range will be notified based on the users settings.
- Users will be rated to ensure quality assurance.
- Each profile will allow the user to select details about them self, for example, their favorite sports they play, their skill level for that sport, and the equipment they own for that sport.

# Strategy

Problem (User Needs):

- Have more pick up games
- Have pick-up games near them
- Have easier accessibility to pick up games
- Have a broader variety of games

# Technological Innovations

## Database-Driven Machine Learning:

- Categorizes personalities, likes, and dislikes of users

## Geographical Image System

- Displays geographical image of surrounding areas near users

# Total Solution

- Create a mobile application that allows users to set up and join in sport events they wish to participate in
- Includes a virtual map of locations that are hosting games
- Allow users to choose place where a game is occurring
- Display events around users that coincide with their personality, likes, and dislikes.

# Strategy

## Unfair Advantage:

- Broader niche of a specific category. (Between a single aspect of a category and an overwhelming category)

## Most Significant:

- Machine Learning Incorporated Database that is capable of learning users' personality, likes, and dislikes

# Secondary Market Research

## Topics Researched:

- Social networking events

<https://showupandplaysports.com/pros-and-cons-of-pick-up-or-drop-in-games>

<https://blog.hubspot.com/sales/face-to-face-networking-stats>

- Community and other types of events

<https://make.wordpress.org/community/2019/04/18/2018-meetup-survey/>

<https://blog.bizzabo.com/event-marketing-statistics#attendee>

- Pick up games

# Secondary Market Research

Things we researched for each topics:

- Demographics
- Frequency in attendance
- Reasons for attendance
- Location
- Networking Potential

# Secondary Market Research

What we found:

- Competitors cover either one sport or a variety of other topics, not just sports
- Most don't go to events that are far away
- Majority hear about event like pick up games through friends.

# Personas

**Persona:** User that is looking for a particular sports to play with friends and/or strangers at a nearby park.

NAME		MARKET SIZE	TYPE
Samuel Simmons		<div><div></div>35 %</div>	Idealist
		<b>Goals</b> <p>I want to look for a game comfortably that I can play with my friends and/or strangers at a park near me without the hassle of asking strangers at the park or friends who are/aren't free.</p>	
		<b>Background</b> <p>I grew up in a rural area in Minnesota and recently moved to an urban city where I met a lot of friends. I am athletic and play many different sports. My favorite sport that I like to play is Basketball. Ball is life.</p>	
<b>Demographic</b> <p>Male 26 years United States</p> <p>+ ADD FIELD</p>		<b>Motivations</b> <p>To play sports in my free time. To be healthy. To make new friends. To make some connections that can be beneficial.</p>	<b>Frustrations</b> <p>Hard to make friends with a busy lifestyle Hard to confront strangers Hard to find an activity that I like to play with others Hard to relieve stress</p>
<b>Technology</b> <p>    </p>			

# Personas

**Persona:** Users that want to invite friends/strangers to a pick up game of their own choosing

NAME Kevin Walsh		MARKET SIZE 59 %	TYPE Rational
		<b>Goals</b> I want an easier time to host a pick up game so that its faster to invite friends/strangers to a game of my choosing near me.	
		<b>Background</b> I am a college student that majors in management. I played sports throughout elementary and high school. I played tennis and basketball whenever I can and love meeting new people.	
<b>Demographic</b> Male 19 years United States + ADD FIELD		<b>Motivations</b> To getter at sports To make new friends To get healthy To relieve stress.	<b>Frustrations</b> Hard to find free time with friends Hard to get strangers to play a round of basketball Hard to find a reason to get fit
<b>Technology</b> 			

# Personas

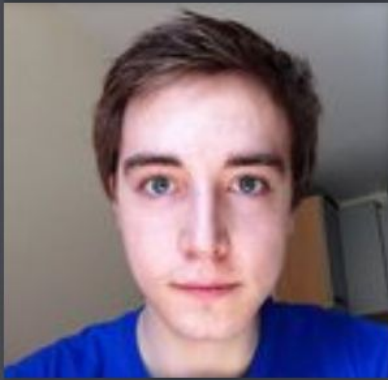

**Persona:** Users that want to network with a group with similar interests face to face from a pick up game/event.

NAME	MARKET SIZE	TYPE
Grace Hawkins	 6 %	Artisan
	<b>Goals</b> I want to find a group of people of the same gender that love the same things I do. In addition, I would love it if I can play sports with them that are near me.	
<b>Background</b> Outgoing, athletic, like meeting new people, extrovert.  College student that likes to play volleyball. Love meeting new volleyball players to play with outside of my time at school.		
<b>Demographic</b> Female 20 years United States  + ADD FIELD	<b>Motivations</b> To get better at volleyball To broaden my friend group To have fun with friends that like the same things I do	<b>Frustrations</b> Hard to find people to play volleyball with especially with girls of the same age near me. Hard to find a park near me that has a volleyball court (Indoors/outdoors)
<b>Technology</b>     		

# Personas

Most important persona: Kevin Walsh

- Love meeting people
- Difficult time finding time to play sports
- Outgoing

NAME	MARKET SIZE	TYPE
Kevin Walsh	 59 %	Rational

<b>Technology</b> <p>    </p>		

# Primary Market Research

Questions asked based off of the Secondary Market Research:

- How often do you play pick up games?
- Do you enjoy playing in pick up games?
- Is networking important to you?
- Would you network with other people in a sports environment?
- How important is engaging with the community to you?
- Do you ever play sports at these community events?
- Is the place of the event important to you?
- What sports do you like to play?
- Did you make new friendships or business partnerships while networking?
- Do you attend events near you?
- What is your gender?
- Where did you hear about an event?
- What is your age?

# Primary Market Research

# Primary Market Research

## Validation of user needs:

- 70.2% of survey takers participated in a pick up game or community event that they heard from their friends.
- Only 12.3% of survey takers heard from online and 17.5% have heard from offline bulletin board.
- This shows that not a lot of people are finding events online.
- With this small sample, we can clearly see that most who hear about these kinds of events; attend, enjoy, and network.
- Therefore, our innovative technology fits the user's needs in allowing a broader and efficient accessibility.

# Competitors

- OpenSports: (most significant)
  - A pick up game application that can host and join events, organize your schedule, and message other players.
- Eventbrite:
  - Event management and ticketing website.
  - Allows users to browse, create, and promote local events.
- Meetup.com:
  - Service that allows users to organize online groups that host in-person events for people with similar interests.

# Competitors

Product features that competitors lack:

Even though these competitors have some similar features from each other, they do not have features that other competitors have.

Our product have those features:

- Graphical Image of Location and Direction
- Machine Learning to learn personality, likes, and dislikes
- Specific Niche

# Commercialization Strategy

After we have our product, our goal will be to partner with workout facilities such as gyms and public parks to advertise our app as a more sophisticated way of finding a means of finding a pickup game. This will get word out of our app to athletes who desire this functionality in their means to find teams and players to interact with them. I means we can use to contact our potential customers is through the database of these workout facilities who already have data on their customers.

# Monetization Strategy

Our plan is to have the application be free to the users of the app. The means in which we can profit from our product is allowing companies to advertise on our platform. This will generate revenue from the traffic of our application. We will also partner with athletic companies who can sponsor their sports equipment that will be featured in our pickup games. In addition, there is a possibility where users or companies can start a tournament. This could increase our profit from sponsors, fees, donations, etc

Sprint #0

# Sprint Goals

- Creating a Business Requirements Document
- Creating a Management Plan
- Creating a Database
- Populating a Sprint Board

# Prioritization Process

We prioritized our tasks based on the deadlines for the tasks.

- Tasks due in the beginning of the sprint are prioritized as high priority.
- Tasks that are due in the middle of sprint are prioritized as medium.
- Tasks with a deadline near the end of the sprint are prioritized as low.

# User Stories

- As an app admin, I want to be able to communicate with a database, so that I can keep records of all information within the app.
- As a member of the management team, I want to be able to have a Business Requirements Document, so that I can describe the characteristics of our proposed system.
- As a member of the management team, I want to be able to have a Management Plan, so that I can understand how the project is executed, monitored, and controlled.
- As a member of the management team, I want to be able to have an interactive Sprint Board, so that we can determine tasks that need to be completed for the current sprint.

# Tasks Completed

- Created Business Requirements Document
  - Project Detail
  - SWOT Analysis
  - Market Segments
  - Primary/Secondary Market Research
- Created Management Plan
  - Gantt Chart
  - Burndown Chart
  - Project Planning Matrix
- Created and initialized a database for data storage and collection

# Database

The screenshot displays the phpMyAdmin web interface in a browser window. The address bar shows the URL: `localhost/phpmyadmin/sql.php?db=pick-up+sportz&table=friends&pos=0`. The left sidebar contains a tree view of the database structure, with the 'pick-up sportz' database selected and its tables listed: 'completedgames', 'friends', 'gameinfo', and 'user'. The 'friends' table is highlighted. The main panel shows a successful query execution: 'MySQL returned an empty result set (i.e. zero rows). (Query took 0.0004 seconds.)'. The SQL query entered is `SELECT * FROM `friends``. Below the query, a table header is visible with columns 'userID' and 'friendID'. The interface includes various toolbars for database management and query execution.

Server: 127.0.0.1 Database: pick-up sportz Table: friends

MySQL returned an empty result set (i.e. zero rows). (Query took 0.0004 seconds.)

```
SELECT * FROM `friends`
```

userID	friendID

Total Hours Spent

205

### Project Progress

02 95

**E**

# Code Development Velocity

- Our Team Sprint Capacity is 3 (lab hours) x 3 (weeks) x 6 (group members) for a total of **54 hours**.
- The only code development that has been done is for the Database. Entering in the SQL queries is the only code that has been created. The total amount of time spent on developing the database is **2 hours**.

# Sprint Board

The screenshot displays a Trello board titled "Sprint Board (Sprint #0)" for the "CECS 491A Group Team". The board is organized into five columns: "Project Backlog", "Sprint Backlog", "To-Do", "In Progress", and "Done".

- Project Backlog:** Contains five cards, each representing a user story. The first card is selected.
  - Sprint #0**  
#1 - As an app admin, I want to be able to communicate with a database, so that I can keep records of all information within the app.
  - Sprint #0**  
#2 - As a member of the management team, I want to be able to have a Business Requirements Document, so that I can describe the characteristics of our proposed system.
  - Sprint #0**  
#3 - As a member of the management team, I want to be able to have a Management Plan, so that I can understand how the project is executed, monitored, and controlled.
  - Sprint #0**  
#4 - As a player, I would like to be able to rate other players, so that I can enjoy each players sportsmanship.
  - Sprint #0**  
#5 - As a player, I want to be able to...
- Sprint Backlog:** Contains three cards, each representing a sprint goal.

## Burndown Chart for Sprint #0

# Sprint Retrospective

Our sprint goals consist of :

- Creating a Business Requirement Document
- Creating a Management Plan
- Creating a database
- Creating a sprint board

Our sprint goals have been met. Even though there were a bit of hiccups along the way, we have completed the sprint goals on time.

Our team's total velocity is 54 hours since:

3 hours per week \* 3 weeks \* 6 members

Current hours worked: ~ **40 hours**

Our burndown chart for sprint #0 is looking good. With all the tasks that have been completed, we can clearly see the graph slowly heading down, signifying that we are almost done with a task.

Team velocity for next sprint:

Pay attention to assignment date and due date so burndown chart looks smoother.

Increase the hours per week

# Sprint Review Records

- Our group reviewed what we accomplished in the Sprints by going over the individual task accomplished.
- We talked about the challenges we came across in the Business Requirement Documents such as how we want to approach the business strategy for our mobile application.
- We met the criteria for the document by fulfilling all of it's requirements such as analysis, research, and strategies for our application.
- Similar to how we did the Management Plan, after completing a section requirement for the document, we discussed how we can incorporate the information to other parts of the document.

# Team Metrics

## “Smooth Time Smooth Flow”

- Assign tasks to personal desire
- Assign remainder tasks with teammates that have less tasks
- Start early with minimal effort
- Go hard throughout the first week
  - So that the remaining week is easier

Results in smoother work pace with less stress.

# Lessons Learned from Agile

- From sprint #0, we were able to learn the time required to complete a Business Requirement Document, which was approximately a few weeks as we had to complete parts such as coming up with our primary research, strategy for our business plan, SWOT analysis, secondary research, determining the size of the market, and commercialization and monetization strategies.
- We had sufficient time to get early versions of this document and fix any dilemmas that we had, such as fixing/adjusting what primary research questions to ask and changing our business strategy.
- For our Management Plan we learned about how to organize work among a team to accomplish a project using tools such as a Sprint Board and track progress you have made through a Gantt Chart.

# Plans for the Next Sprint

- Initialized application framework and system architecture
- Tested the initial stages of code developed.
- Started implementation of front-end functionality.
- Organized the data required for database system development.
- Identified columns for table information.
- Created tables required for data storage.
